1 Requirements

This document details all the steps required to deploy the CTX-Task-Scheduler module.

Requirements:

- Remote Desktop Access to the Cortex Application Server
- Minimum Cortex v6.4 installed on the Cortex Application Server

2 Import CTX-Task-Scheduler

To deploy the CTX-Task-Scheduler module on your Cortex system, CTX-Task-Scheduler Studio Package needs to be imported on your Cortex system. To do this:

- Download the CTX-Task-Scheduler Studio Package
- Import the Studio Package in Cortex Gateway
- Ensure the relevant users have the required permissions in 'Studio Authorisation'

After this, all users in the authorised groups will be able to view and execute the subtasks.

3 Publish Flows

Once the studiopkg file is imported the flows can then be published, which will make them available in LivePortal. To do this, perform the following steps:

- From Cortex Gateway, select 'Settings' – 'Studio Publish'
- Tick the Cortex Task Scheduler group under 'Tools'
- Click Publish
